

[DIY Terra Cotta Garden Mushrooms](#)

Instructions and tutorial photos found on [AnnsEntitledLife.com](#)

DIY Terra Cotta Garden Mushrooms Materials:

- [Terra Cotta Pot](#) with matching Bottom (any size works!)
- [White All Purpose Paint](#)
- [Red Paint](#)
- [E6000® Craft Adhesive](#) If you live in a wet area, you may want to use [Marine Goop](#). It is listed as a “totally weatherproof adhesive and sealant”, and I agree with that assessment!
- [Art Palette](#) or Paper Plate
- [Foam Paint Brush](#)
- [Small Paint Brush](#)

DIY Terra Cotta Garden Mushrooms Directions:

- Cover your work area in case of spills.
- Squirt several tablespoons of red paint onto an [art palette](#) or paper plate.
- Using a foam paint brush, paint your terra cotta pots and bottoms with your red paint and let dry completely (these dry super-fast).
- **Note:** Read glue directions before beginning this portion of the project. You want to be in a well ventilated area, and cover the surface of the bench or table before applying. If you use the [marine goop](#) make sure you cover your surface before applying. I use a plastic topped folding table, and Hubby is always crabbing that I leave behind blobs of glue (hey, I can peel it off... eventually).
- Once the terra cotta pot and bottom are dry, place a little glue around the bottom of the terra cotta pots and press the bottom onto the top to look like a mushroom.
- Now you can paint white polka dots onto the top of your mushroom using your [white paint](#) and a small paint brush.
- Let your mushrooms dry for 24 hours before placing in your garden.
- For more durability, you can spray with a sealant.
