

[Snowflake Soap](#)

Instructions and Tutorial Photos on AnnsEntitledLife.com

Snowflake Soap Ingredients:

- Shea Butter Soap Base
- Blue Soap Colorant
- Soap Scent – This tutorial used Vanilla, but you can use any scent you like!

Snowflake Soap Mise en Place:

- Snowflake Soap Mold
- Large Glass Measuring Cup
- Silicone or Wooden Spoon
- Rubbing Alcohol

Snowflake Soap Directions:

- Cut off two (2) ice cube sized pieces from your soap block and place into your glass measuring cup.
- Add 3-4 drops of blue soap colorant, and microwave for 30 seconds; stir.
- Pour your melted blue soap into just the snowflake part of your mold. Tip: it helps if you pour from the middle and let the soap run into the outer edges of the mold on its own.
- Place your mold into the freezer for about 5 minutes.
- Clean your measuring cup (or use a second, clean measuring cup).
- Add five (5) ice cubes sized pieces of soap and place into your glass measuring cup.
- Microwave for 30-45 seconds; stir. (If you need more microwave time to melt, do 15 second increments and stir in between each microwaving.)
- Mix in a 1 teaspoon of your favorite soap scent.
- Pour your white soap over your solid blue snowflakes, filling to the top of the mold.
- Lightly spray the soap with rubbing alcohol to prevent bubbling.

- Place your mold back in the freezer for about 30 minutes or until soap is hardened.
- Carefully press up on the bottom of your mold to remove your soaps.
- If presenting as gifts, you can tie with a ribbon, wrap with cellophane and a ribbon, etc.
- These are perfect for display, gift giving, or to set in a linen closet. Since they are snowflakes, they are great “fancy soap decor” well into March.
